

REMARKS

In view of the fact that only minor formal matters appear to be standing in the way of allowance of this application, every effort has been made to eliminate such issues so that this application can be passed for issuance as a patent. Thus, by the above actions, claims 37 to 39 have been amended to eliminate the indication that the connection between the driver and the intermediate lever is a pivotable connection, claims 37 and 38 have been amended to eliminate reference to an unstated "at least one other part" and claim 24 has been amended to both eliminate the redundant clause quoted by the Examiner and to provide proper antecedent reference for the coupling point to the first coupling point in claim 38. Thus, the rejection under § 112 has been fully obviated and should now be withdrawn.

Furthermore, relative to claims 8-11, the dependency of these claims from claim 6 has been changed to claim 5 so that they no longer recite a non-elected specie directed to an undisclosed embodiment in which a lock element is provided for a dual guideway embodiment. Thus, these claims should now also be rejoined and allowed along with all of the other claims.

While the present application is now believed to be in condition for allowance, should the Examiner find some issue to remain unresolved, or should any new issues arise, which could be eliminated through discussions with applicant's representative, then the Examiner is invited to contact the undersigned by telephone in order that the further prosecution of this application can thereby be expedited.

Respectfully submitted,

David S. Safran
